

# ExpertCAD™

## Specifying a Window Size for ExpertCAD

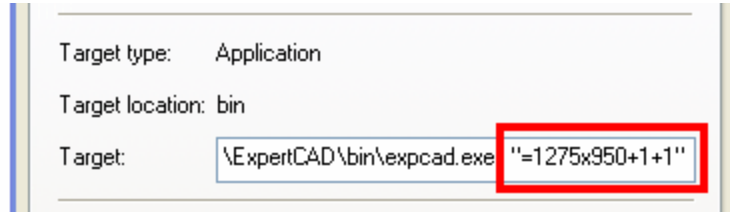

### Synopsis

With the release of Version 7.7 of ExpertCAD you can now specify the size of the window when ExpertCAD starts. This is useful when don't want the Taskbar to obscure the bottom of the ExpertCAD window. To use this feature follow the steps below.

- Step 1.** Right click on **Properties** for ExpertCAD in *Start->Program Files->ExpertCAD* or on the shortcut on the Desktop or in the Taskbar.
- Step 2.** On the ExpertCAD Properties dialog click on the **Shortcut** tab.

**Step 3.** Add the following to the line Target: “=1275x950+1+1”

Target type: Application  
Target location: bin  
Target: \ExpertCAD\bin\expcad.exe "=1275x950+1+1"

The line should now read:

**“C:\Program Files\ExpertCAD\bin\expcad.exe” “=1275x950+1+1”**

Note the space between the double quotes 

**Step 4.** Click the Ok button.

**Note:** Based on your screen resolution setting you may have to increase or decrease the first two values.
