

# PROSPECTOR™

*The Gold Standard In Toolmaking*

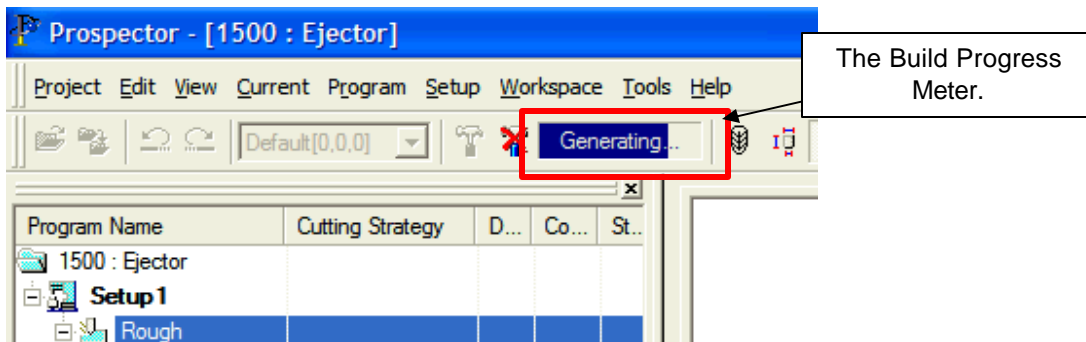

## How to Get the Build Progress Meter Back

The information in this tip applies to:

- Prospector (all versions)

### **ISSUE**

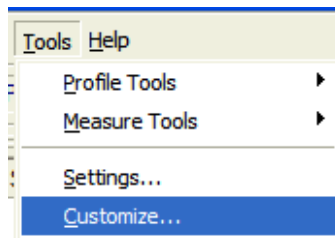

The Build Progress Meter has disappeared and you wish to get it back. This meter could disappear if you are making changes through the Tools > Customize menu and accidentally drag the meter to a different part of the screen. The same holds true with all other toolbar items, if you drag them to a different part of the screen, they could disappear. It is very easy to get them back though.

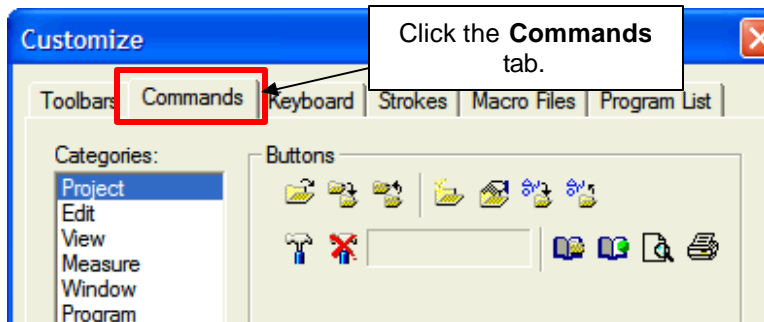

### **RESOLUTION**

To get the Build Progress Meter back, do the following:

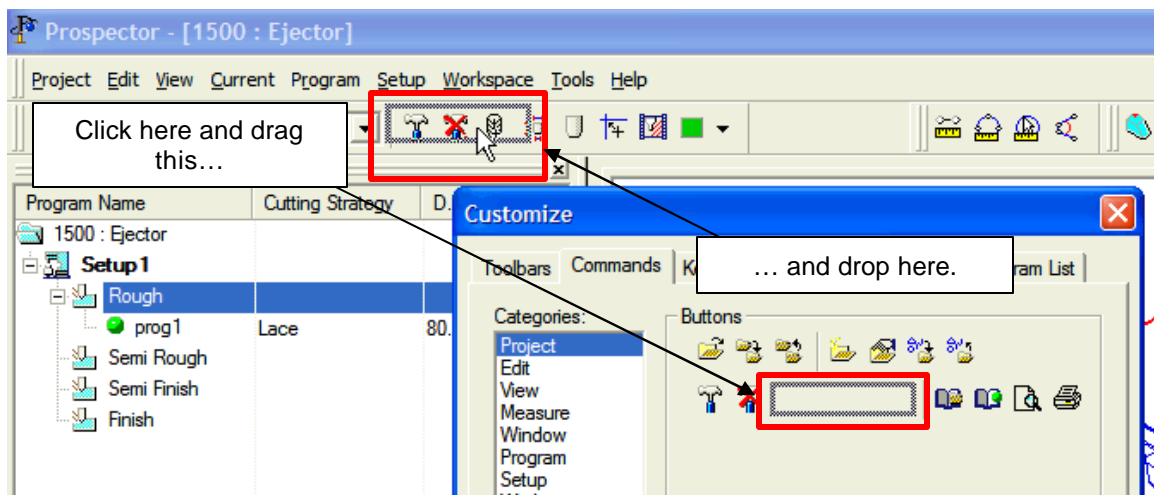

1. Click on **Tools > Customize** to bring up the Customize dialog.

2. Click the **Commands** tab.

3. Drag and drop the **Build Progress Meter** to the desired location on your toolbar.

4. Click **OK** to close the Customize dialog.

Remember, you can do the same to get other toolbar items also.
