## Line Styles and Text are Faint When Printing to a Monochrome Printer

The information in this tip applies to:

- ToolDesigner (all Windows versions)
- ExpertCAD (all Windows versions)

### **ISSUE**

Line styles and text are very faint when printing a drawing to a monochrome (black and white) printer.

### **RESOLUTION**

This issue can be corrected by disabling printing to a color printer before printing. To disable color printing, go to the **SYSTEM->SET-UP** menu, and click on **Printing...** to bring up the Printing dialog. Now uncheck the **Printing to a Color Printer** checkbox and hit **OK**. See the diagram below:
